Hi Angela and Peter, I'm forwarding this issue to you for your awareness. Brenda is trying to pull the federal and state partners together for a meeting to determine what we can do, if anything, to help resolve the problem. Mr. Walker has contacted many agencies in his attempt to seek a solution.
Brenda and Teena, I'm wondering if it wouldn't make sense to get some of the gray material for a quick metals/inorganic analysis in the lab?

Hello Jill

Pam Sanguinetti of the Coe has made a number of statements that she has not backed up. I wrote a letter to Chief Walker to put her statements in writing a response has been given. Not much of what she has told me was proven to be true.

We are finding a large amount of grey precipitate in our tanks and in Discovery Bay. I was not here before the dredging and analysis of it indicates that it could be toxic to larval and juvenile shellfish. This could not be the intent of the Nationwide permit program.

Tom
